

GOVERNED AI SOFTWARE DELIVERY

Reign Factory

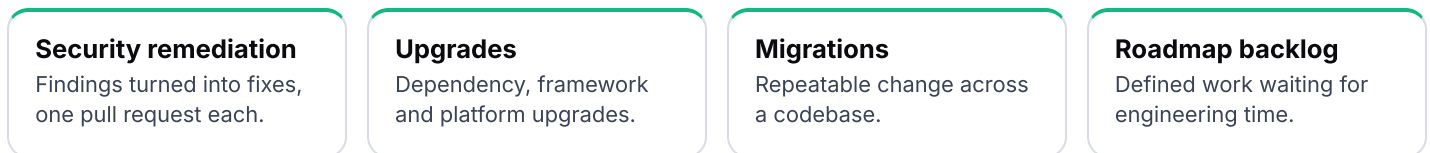

You write the tickets. The factory opens the pull requests.

AI agents pick up each ticket and return a tested pull request through the delivery process you already have. Our forward-deployed engineers work alongside your team, and we measure the results against your own baseline.

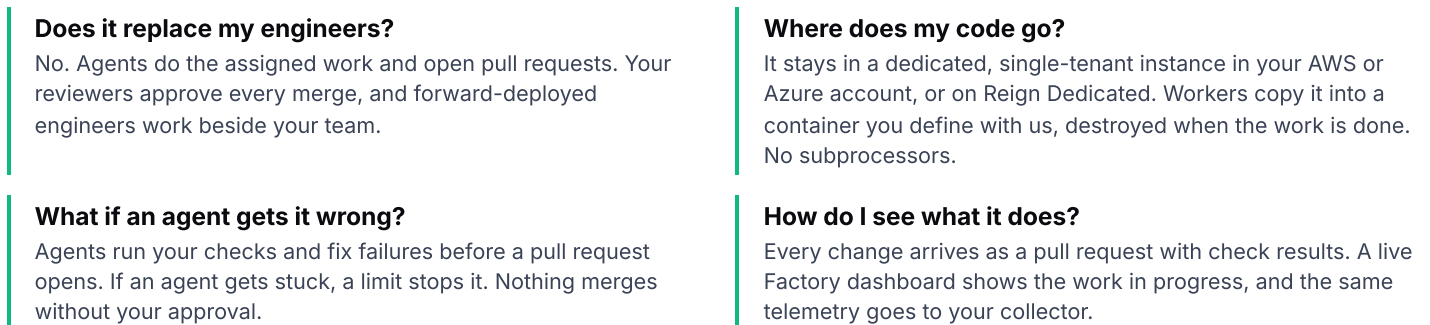

HOW THE WORK FLOWS

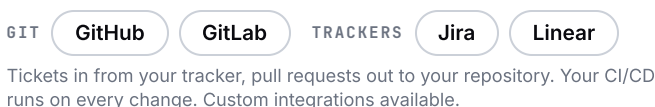

WHAT IT WORKS ON

QUESTIONS BUYERS ASK

WORKS WITH YOUR SDLC TOOLS

HOW YOU BUY IT

One subscription per delivery process: a supervisor with five AI workers, operation 24×7 and forward-deployed engineer hours. Add workers in packs of five.

Reign carries the work. You keep the choice.

	Reign Factory	Frontier AI providers	AI coding platforms	Build it yourself
Build and maintain the factory	Reign kept current as AI technologies change	You	You	You
Adoption and support	Reign forward-deployed engineers	You	You	You
Run it 24x7	Reign	Vendor the model only	Vendor the product only	You
Who chooses the model	You frontier models, your keys	Vendor their models only	Vendor their supported list	You
Your SDLC tools and custom integrations	Reign GitHub, GitLab, Jira, Linear	Vendor their connectors	Vendor their supported list	You
Where your code goes	You your cloud, your keys	Vendor	Vendor	You
Evidence you own, every change	Reign in your own tools	Vendor usage in their console	Vendor audit logs in their product	You you assemble it

WITH REIGN FACTORY

Open by Design. Your models, your data, your choice. Use frontier models on your own accounts and keys. Every change lands in your repository for your team to approve, and you can swap models without changing how the work is governed.

Category comparison of approaches, not a claim about any named product.

WHO DOES WHAT

Reign and our engineers

- Runs, monitors and upgrades the service, 24x7
- Configures agents, models, checks and stop rules
- The factory works tickets and opens pull requests
- Forward-deployed engineers coach your team

Your team

- Writes and prioritizes the tickets
- Sets the rules and the classes of work
- Reviews and approves every merge
- Runs QA and releases through your own process

THE FIRST 90 DAYS

DAYS 1 TO 30

The Launch

Connect tracker, repository and checks.
Set the rules. First pull requests reviewed.

DAYS 31 TO 60

Steady flow

Configured workflows run every day.
Engineers tune the rules with your team.

DAYS 61 TO 90

First health check

We compare delivery speed and rework with your baseline, plus model cost per merged change. Then we keep checking.

Start with a 30-minute delivery briefing

Bring one piece of work you want to advance.
