

MANAGED AI ACCESS

Reign Gateway

One governed path to the models your teams use. Your policy decides.

Your teams and agents reach approved models, tools and business APIs through one endpoint. Reign Gateway checks who is calling, applies your policy and spend limits, and records each call. Reign runs it for you, 24×7.

THE BOUNDARY EVERY CALL CROSSES

QUESTIONS BUYERS ASK

Do my developers have to change code?

Very little. Point them at one endpoint: OpenAI-compatible, Anthropic-compatible, or MCP. Your SDKs keep working.

What gets recorded?

Caller, model, tokens, cost and guardrail decisions for each model call, and each MCP tool call through the gateway. Content capture is off by default.

How are spend and content controlled?

Request, token and dollar limits. Guardrails block or mask sensitive text, and can hand off to a guardrail service you already run.

Which models can we use?

Your choice, on your own accounts and keys: OpenAI, Anthropic, Gemini, Bedrock, Azure OpenAI, or your own open-weight endpoint.

Who can reach which model or tool?

Identity is checked on every request. Access grants let each person or agent reach only the models and tools you approve.

Where does it run, and who runs it?

In a single-tenant deployment, hosted by Reign or in your own cloud. It is highly available, and Reign runs, patches and upgrades it 24×7.

WORKS WITH

YOUR APPS AND AGENTS CONNECT THROUGH

Plus any HTTPS business API you approve.

CALLS REACH

Reign carries the work. You keep the choice.

	Reign Gateway	Hosted AI gateways	Cloud AI gateways	Open source, self-run
Install, run and upgrade, 24x7	Reign monitored and patched	Vendor shared service	Vendor the service; you build on it	You
Policy and guardrails kept current	Reign updated by engineers	You	You	You
Who chooses the model	You any model, your keys	You their supported list	Vendor favors their catalog	You
MCP tools and business APIs	Reign governed access	Vendor their supported list	You built on their services	You plugins you build
Where your data goes	You approved destinations	Vendor through their service	You your cloud account	You
Evidence you own, every call	Reign in your storage	Vendor logs in their console	You logging you assemble	You you configure and keep it

WITH REIGN GATEWAY

Open by Design. Your models, your data, your choice. Use frontier, your own or open-weight models, on your own accounts and keys. A gateway dedicated to you checks and records every call, and you can swap models without rewriting your policy.

Category comparison of approaches, not a claim about any named product.

WHO DOES WHAT

Reign and our engineers → Installs, runs and upgrades the gateway, 24x7 → Writes and updates policies and guardrails with your team → Syncs the gateway with your agent and MCP register → Handles incidents, urgent access changes and key revocation	Your team → Sets the policy and approves models, tools and limits → Connects your identity provider and names policy owners → Holds the model provider accounts and the evidence storage → Supplies the models, tools and APIs the gateway connects to → Chooses what content, if any, is captured
